Summary

Associate Forward Deployed Engineer at Wednesday Solutions, working directly with client founders. The engineer behind a client's AI video platform at ∼$200K MRR and 170+ paying customers: analytics, billing, team access, and releases, from pricing calls to production fixes. Rebuilt and handed over a US EdTech client's grading platform.

Education

Chandigarh College of Engineering & Technology — Chandigarh, IN

Bachelor's of Engineering in Computer Science & Engineering; CGPA: 8.31 — *Dec. 2021 – Jun. 2025*

Experience

Wednesday Solutions — Pune, IN

Associate Forward Deployed Engineer — *Feb. 2026 – Present*

AI video platform, US client | React, Supabase, Stripe, AWS Lambda, Python — *Jun. 2026 – Present*

- Own Stripe billing for the platform at ∼$200K MRR and 170+ paying customers; rebuilt its pricing into modular plans in 8 days, and revenue from existing customers then rose 35% with new customers up from 11.3 to 12.6 a month.
- Built a sales checkout for the platform in React on 10+ edge functions, where the prospect pays through Stripe Checkout before any account exists; 71% of quoted prospects paid, at a median of 12 minutes from quote to payment.
- Changed 2 pricing and access policies on live calls with the platform's founders, and caught a plan migration that would have cut every migrating user's AI allowance by 9% before it reached a single customer.
- Fixed a renewal bug on the platform that left a 24-seat paying team with 0 AI tokens, restored all 240,000 tokens the same night, and added a guard that fails loudly on any zero grant, with an RCA for the client.

Grading platform, US EdTech client | Spring Boot, React, AWS, Terraform — *Feb. 2026 – May 2026*

- Connected Moodle and self-hosted Canvas, which has no webhooks, to the platform: submissions in and grades back through 5 SQS queues with backoff retries and dead-letter queues.

Internal products | FastAPI, LangGraph, Postgres — *May 2026 – Jun. 2026*

- Built a content engine alone in FastAPI and LangGraph: 26 AI agents that research, draft, and publish articles as GitHub PRs, with human review on Postgres checkpoints, and demoed it to the CEO.

Projects

Polaris | *Claude Code, Bash, JavaScript* — *May 2026 – Present*

- Built Polaris, a Claude Code plugin that routes plain-language tasks into 27 gated flows across 29 agents, shipped over 12 releases to v1.19.0 and used daily on client work in production.
- Enforced phase completion in Polaris with an on-disk ledger and artifact hashes, cut session startup from 19s to 0.4s, and raised correct routing from 8 of 21 domain prompts to 21 of 21, pinned by fixtures.
- Link to project - github.com/abhisheksharm-3/polaris

Inquora | *Next.js, TypeScript, Supabase, pgvector* — *Jul. 2025 – Present*

- Built Inquora alone, a cited document Q&A app on Supabase with pgvector and full-text search fused in 1 SQL function across 35 migrations, and cut a repository index from 2,664 to 711 chunks with the same coverage.

Achievements

Gen AI Exchange Hackathon by Google — October 2024

Winner — *Network18 Track*

- Led a 3-person team to the Network18 track win at Google's Gen AI Exchange Hackathon with Credify, a media attribution and forgery detection system built in 1 month on Next.js and FastAPI with Gemini.

Technical Skills

Languages: TypeScript, Python, Java, SQL, JavaScript, Go, Kotlin, C/C++
Frontend: React.js, Next.js, TanStack Query, TailwindCSS, Redux Toolkit
Backend: Spring Boot (Java), FastAPI, REST, SSE, Node.js, Express.js
AI & Agents: LangGraph, MCP, LiteLLM, Gemini, LangChain, Pinecone
Data: PostgreSQL, Supabase, Redis, MySQL, MongoDB, Neo4j
Cloud & DevOps: AWS (ECS, SQS, RDS, Lambda, Cognito, CloudFront, CloudWatch, IAM, S3, SES), Terraform, Docker, CI/CD
Platform & Tooling: Stripe Billing, k6, Sentry, Git, Event-Driven Architecture, Linux/Unix, Mixpanel
Mobile: Jetpack Compose, React Native
